Pollution is the introduction of contaminants into the natural environment that cause adverse change. Pollution can take the form of chemical substances or energy, such as noise, heat or light. Pollutants, the components of pollution, can be either foreign substances/energies or naturally occurring contaminants. Pollution is often classed as point source or nonpoint source pollution.

The environmental impact of the coal industry includes issues such as land use, waste management, water and air pollution, caused by the coal mining, processing and the use of its products. In addition to atmospheric pollution, coal burning produces hundreds of millions of tons of solid waste products annually, including fly ash, bottom ash, and flue-gas desulfurization sludge, that contain ...

Factory Farm Pollution In today's world there are a host of serious environmental problems, and factory farming is one of the top causes of pollution. [1] Scientific research has found that factory farming's method of crowding and confining animals in warehouse-like conditions before killing them and mass-producing both "meat" from cows, pigs and chickens as well as dairy and eggs ...

1. Introduction. Arsenic (As) is a toxic metalloid with numerous adverse health effects, including skin lesions, cardiovascular diseases, and cancers (Gilbert-Diamond et al., 2011, Taheri et al., 2016). In the environmental system, As originates from anthropogenic sources, such as mining activities, pesticides, and wood impregnation, and geogenic sources, such as bedrock weathering, biological ...
