when her optimum fertile period is. The bitch ovulates two days after her LH surge (Luteinizing Hormone-the biological trigger resulting in ovulation). Following ovulation the eggs require an additional two days to complete maturation and to be fertile. Therefore the optimum fertile period in the bitch is days 4, 5 and 6 post the LH surge (day 0).

### **TIMING THE FERTILE PERIOD OF THE BITCH: BRIEF REVIEW**

For successful breeding, at least one neutron must be exclusively available for interaction with fertile isotope for every neutron absorbed by fuel, after taking into account of neutron absorption in core and structural materials.

### **Steven M. Jones Associate Professor - Livestock**

Breeding soundness evaluations categorize bulls as either, likely fertile, likely subfertile, or sterile. The current standards of the Society for Theriogenology provide a uniform method of assessing a bull's

likelihood of accomplishing pregnancy in 25 or more open, healthy, cycling cows in a 65-70 day breeding season.

\*Assistant Professor and Extension Poultry Specialist, Associate Professor and Extension Poultry Specialist, The Texas A&M University System. 2.

### **Hatching Eggs in the Classroom: A Teacher's Guide - Poultry**

Evaluating breeding soundness of bulls is an often neglected management practice. Producers may incorrectly believe that bulls that have previously proven fertile are of sound breeding value for the rest of their lives. They may also assume that new bulls are reproductively sound simply because of some vague or implied guarantee by the seller.
